

Aerpro Headunit Update Guide

Notes before Continuing

- Your **currently saved settings will be reset to factory default** on your Head Unit. You can take pictures of any settings you have changed, such as EQ sliders, so you can restore those settings after the update is complete.
- **Please disconnect/forget your phone from the head unit and bluetooth before updating to ensure a smooth re-connection process.**
- You will also require a blank USB device with a storage capacity of 32GB or less that is formatted in **FAT32**.
- We recommend updating to the latest version only if you are having issues or will be utilising one of the new features.
- Please also ensure that no other USB device is currently connected on any of the USB ports as it will interfere with the update process.

You can check if your Aerpro headunit requires an update by navigating to the Version section on your head unit in the settings and comparing the date of the current firmware to that of the firmware on our Aerpro website.

Aerpro Headunit Update Guide

If the date on the Aerpro website is later than the date listed on your head unit, then an update is available.

Note, that there isn't any harm in updating the firmware anyway if you're unsure.

AM705 (<https://aerpro.com/AM705>)

AM706D (<https://aerpro.com/AM706D>)

AM905D (<https://aerpro.com/AM905D>)

AM1005D (<https://aerpro.com/AM1005D>)

Navigate to the Aerpro website (<https://aerpro.com>) and search for your head units model number based on the system version your head unit lists.

to a particular Vehicle by d model of your vehicle.	Search am705 Search for a product, a vehicle that you are looking to have a product fit, or a product category.	Find your headunit Enter model Search for your headunit parts you'll need.
--	--	---

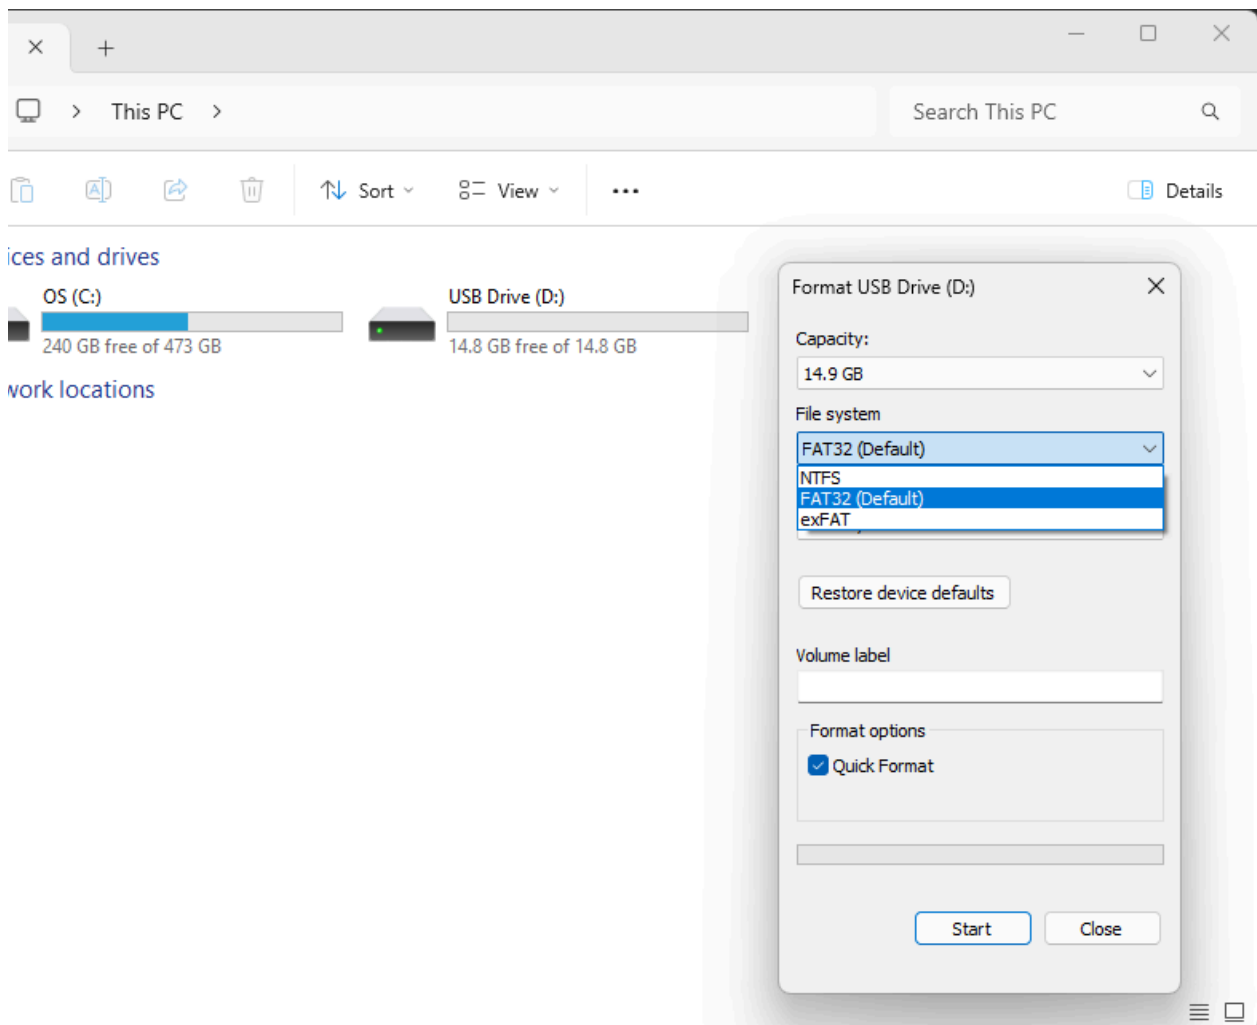

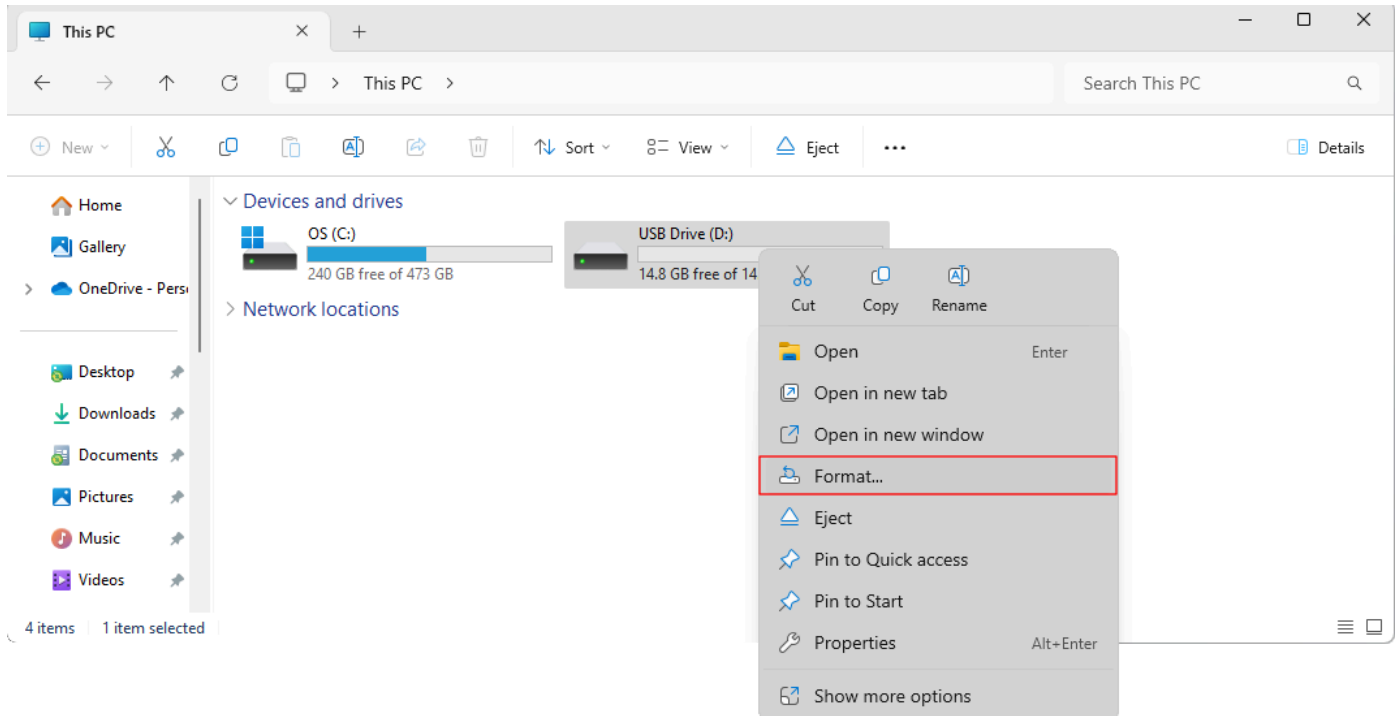

Scroll down the bottom and click the zip file to download the firmware update.

The files will be contained in a zip file. We can use Windows built in zip manager to open the zip file to view the files

Manuals ▾ Manuals:  Manual
Firmware ▾ Firmware:  AM705 Firmware Update (22.07.2026)

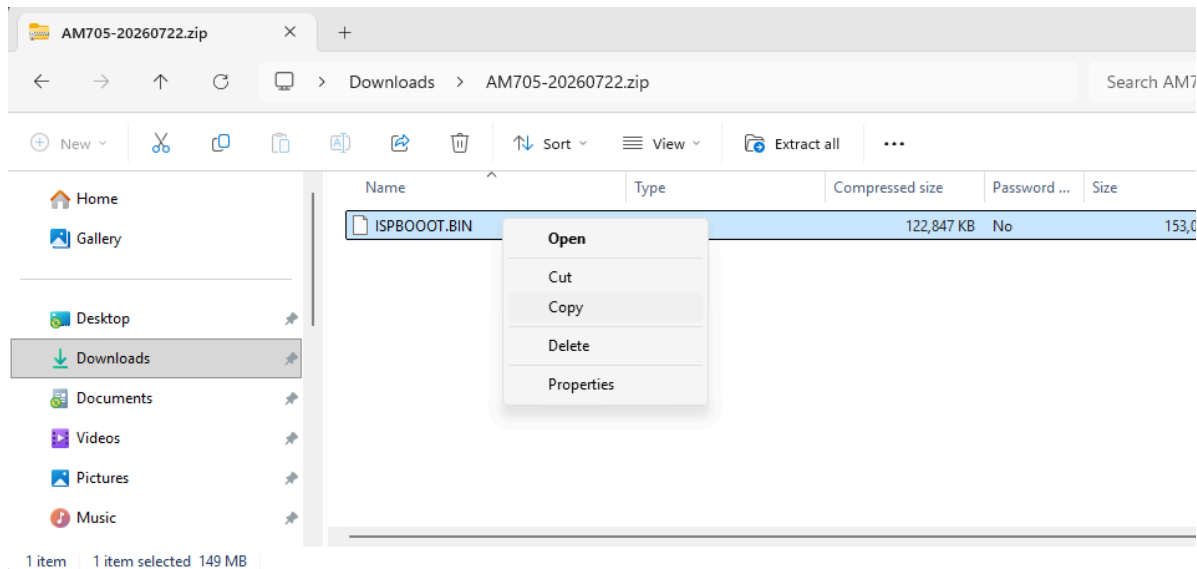

Plug in the USB device, ensuring it is blank, 32GB or less and is formatted in FAT32. You can format the USB device by right clicking the USB device and selecting format. Here you can make sure it is set to FAT32. **PLEASE BE AWARE, ALL YOUR FILES WILL BE DELETED ON THE USB WHEN FORMATTING.**

Aerpro Headunit Update Guide

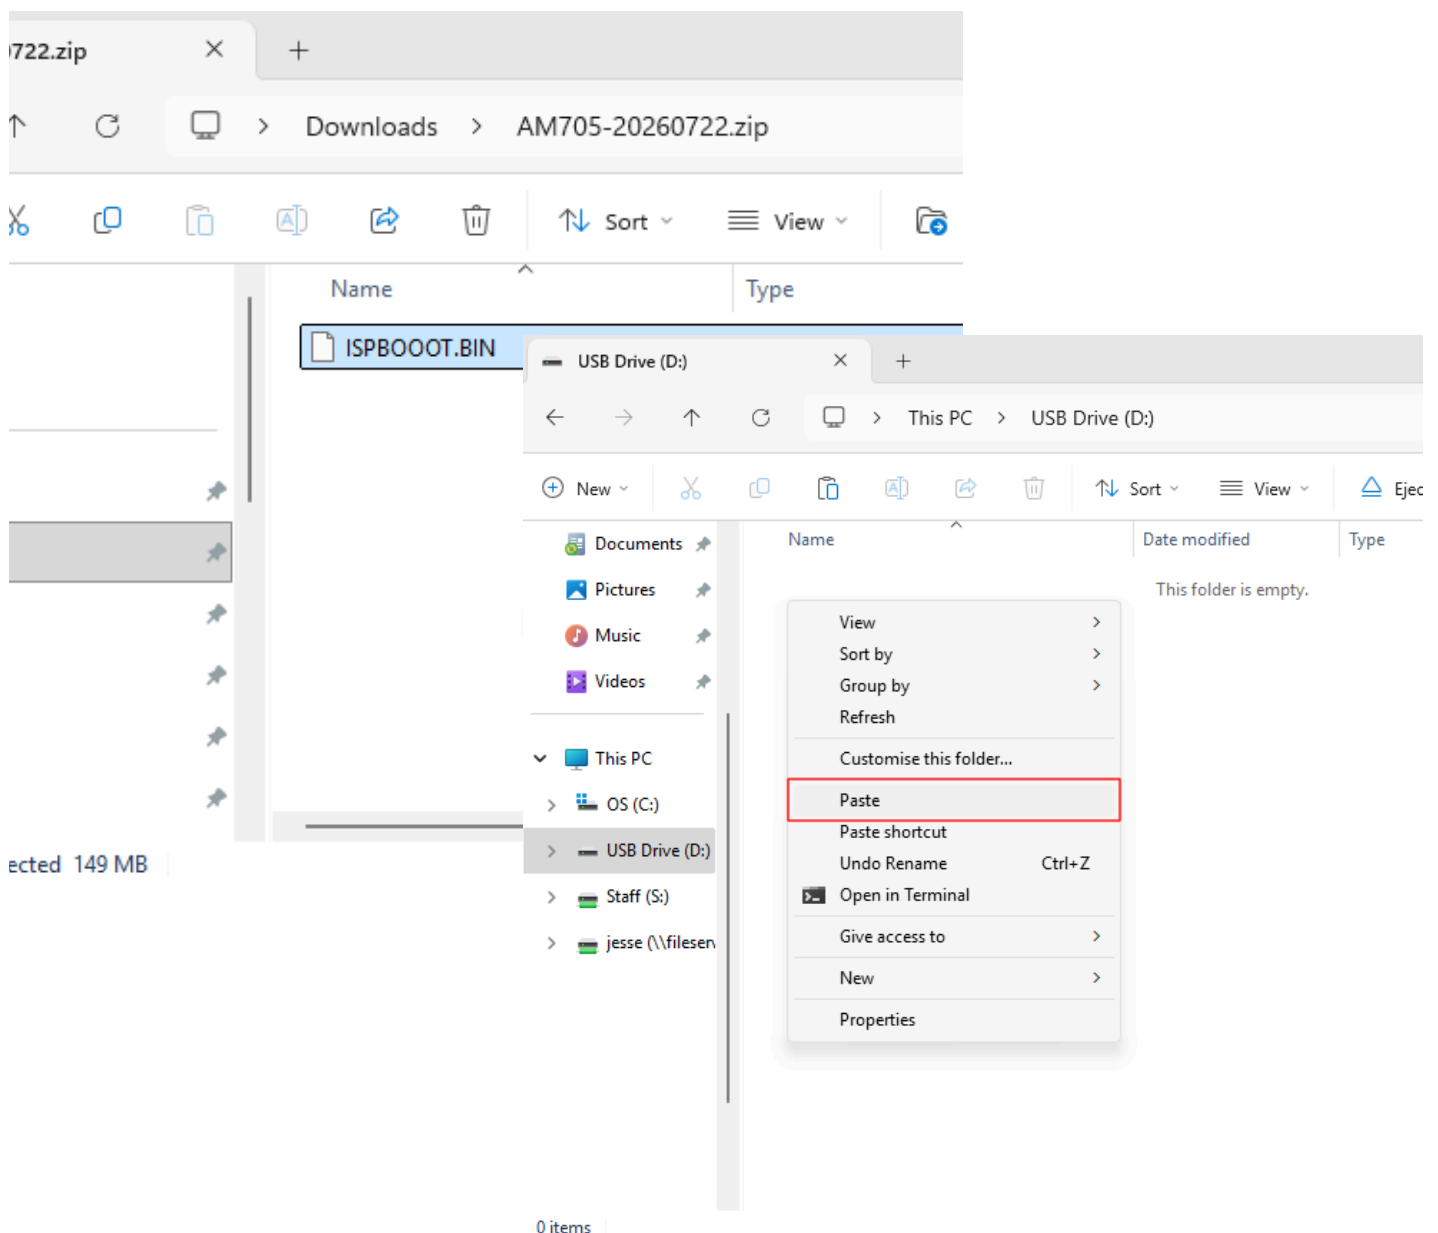

Once formatted, open up the downloaded zip file. Inside will be one file. Copy the single file.

Aerpro Headunit Update Guide

Once you have copied, navigate to your inserted USB drive and right click in the empty spot and click paste. There should be 1 file on the USB device. Safely remove the USB device and move back to your vehicle to install the first step firmware.

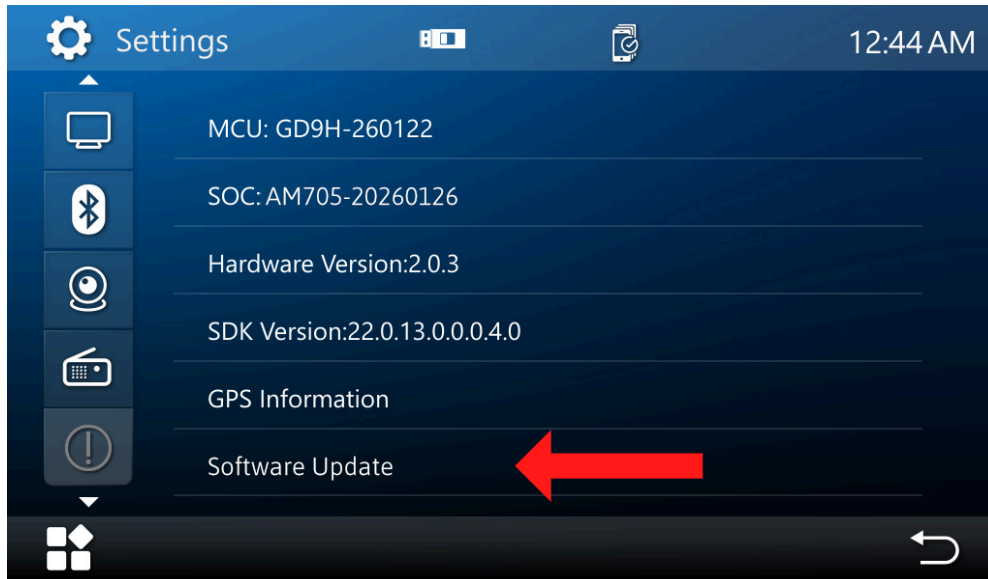

Aerpro Headunit Update Guide

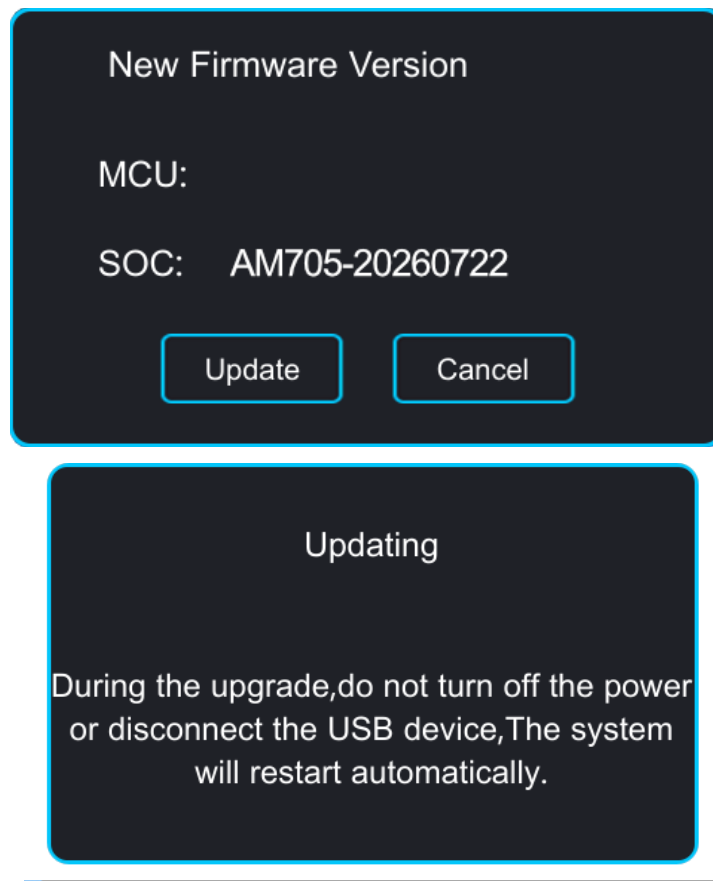

It is **very important** that the following steps are followed exactly.

To install the update, turn on the unit. Then once booted, plug in the update USB into the USB port for the headunit (NOTE: USB port has to be the one used for CarPlay/Android Auto, this would typically be connected to the factory USB if applicable. Also please disconnect any other USB device currently connected to the other USB device as it will interfere with the update process.)

Navigate to the Settings, then Info tab and there will now be an option to update the software

A screen will appear showing the new version you want to install with and update and cancel button. Pressing 'Update' will then begin the installation process.

Aerpro Headunit Update Guide

Once you have confirmed the update, the system will turn off, then reboot to a white 'Updating' screen.

Updating...

DO NOT TURN OFF THE VEHICLE DURING THIS PROCEDURE. Please be patient with the process.

Once the update has finished, you can remove the USB drive.

It is recommended factory reset the head unit and then turn off the car, wait 30 seconds then turn it back on. Then you can check the date number to make sure it has updated successfully and you may change the settings to your taste.

Aerpro Headunit Update Guide

Update changelog

22.07.26

- Added Aerpro InfoLink+ UART functionality (for AM706D/AM905D/AM1005D)
- Improvements to DAB+ (for AM706D/AM905D/AM1005D)
- Adjusted audio level defaults to be a more consistent user experience
- Added new wallpapers and changed default wallpaper to keep it inline with other units (for AM705)
- Various Bug fixes
